Tensioner

1/4" mild steel; 1/2" mild steel rod, machined and welded

Notes:

Tensioner can be machined from 1/2" thick steel, or welded up from 1/4" thick plate and 1/2" rod as noted above. Note the orientation of the tensioner with respect to the tension bracket; the correct orientation leaves 1/8" of room for the tensioner to swivel inward to allow a full range of tracking adjustment.
